Online Banking

- This scenario describes how a customer can login into online banking and use the Bill Payment Facility. The customer can see a dashboard of outstanding bills of registered billers. He can add, modify, and delete a biller detail. The customer can configure SMS, email alerts for different billing actions. He can see history of past paid bills.

Project Tracking

- As a new user, I want to sign up using my existing Google account so that I don't have to keep track of another account. Moreover, I want to be guided through the platform after registration so that I can discover the core features. In addition, I want to receive mobile notifications so that I can get relevant updates whenever I'm on the go. On the other hand, as a team manager, I want to see the status of all projects at a glance so that I can easily track everyone's progress.

Listing Management System

- **A Listing Management System** a real estate company is used by the real estate agents and managers on the daily basis. To be able to do any job with the system, any user must first have their credentials verified by the system. An agent can create a listing and then retrieve it later when needed. Some agents can update listings as well. A listing update becomes complete only after a manager approves it. Managers can get listing reports from the system. They can also remove a listing to an archive file. A listing moved to trash when the company doesn't want to list the property any longer and after it stays in the archive file for some time.

Library Management System

- A **Library Management System** is managed by a library or group of libraries. Patrons of the library can search library catalog online to locate various resources - books, periodicals, audio and visual materials, or other items under control of the library. Patrons may reserve or renew item, provide feedback, and manage their account.

Exam System

- A Software Engineering instructor prepares an exam, he informs his students about the exam details such as date, time and the contents. He also informs his Assistant to be ready for invigilate the exam and to mark it, the instructor should provide a solution manual to the assistant. The instructor should record the students' marks and store the exam papers for later use.
